About Me.

Backend Engineer focused on building high-performance APIs, services, and systems involving design, domain logic, and algorithmic problem-solving to address real-world problems while meeting both user and business demands. Experienced in building complex APIs, real-time communication systems, and data-intensive backend services using Go and Node.js. Skilled at translating the real-world into efficient data models, optimizing performance, and designing clean paths through technical complexity.

Skills.

- + Go
- + JavaScript
- + TypeScript
- + Node.js
- + Express.js
- + GoFiber
- + PLpgSQL
- + C
- + PostgreSQL
- + Neo4j
- + Redis
- + SQL
- + CypherQL
- + HTTP
- + WebSocket
- + gRPC
- + REST API
- + Google Cloud Platform
- + Git & GitHub
- + GitHub Actions
- + Unit & Integration Testing
- + Endpoint Testing
- + Postman
- + OpenAPI Spec.
- + AsyncAPI Spec.

Projects.

Social Media API - i9lyfe Since Dec. 2023

A full-fledged social media backend API built in Go, featuring user authentication, content sharing, content discovery and user interaction, real-time notifications, user following, user chat, and scalable architecture using PostgreSQL, Redis, Neo4j, and GCS.

Featuring:

- **Go:** `sync.Map`, `sync.WaitGroup`, Channels, Goroutines, Data parallelism
- **Redis Key-Value:** Hash, Unsorted/Sorted Set, ZCARD, SCARD, ZRANGE, ZSCAN
- **Redis Pipelining:** Batch Reads/Writes, 1-RTT. Reduced network I/O cost
- **Redis Streams:** Event sourcing, Event streaming, Background tasks queue
- **Redis Pub/Sub:** Subscription-based real-time update delivery
- **PostgreSQL:** Relational data model, Stored functions, PL/pgSQL, CTEs.
- **WebSocket:** Server-to-Client events, and Client-to-Server actions/commands.
- **Google Cloud Storage:** Signed up/download URLs. Post, Comment, and Chat message multimedia.
- JWT, bcrypt, helmet
- **MessagePack** (major use), JSON (minor use)
- **Fiber (v3):** Go's fastest HTTP API framework built on Fasthttp
- **Neo4j/Cypher:** Content Recommendation System (upcoming future)
- **Background Workers:** XREADGROUP, Caching, Reliability, Expensive operations (large DB writes and fan-outs), Idempotency, Redis transactional pipeline
- C4, Mermaid, DBDiagram.io, httptest, stretchr-testify, go-testdeep, CI

Visit Repo (<https://github.com/the-real-i9/i9lyfe-server>) for architecture diagram, sequence diagrams, ER diagram, and User-story test cases.

Skills. (continued)

Frontend Skills & Tools

- + HTML5
- + CSS3
- + TailwindCSS
- + Web APIs
- + React (JSX, TSX)
- + Vite
- + Figma

Soft Skills & Extra.

- + Logical Reasoning
- + Problem Solving
- + Product Thinking
- + UX Thinking
- + Communication
- + Graphics Design
- + Touch Typing (>60WPM)

Projects. (continued)

Chat App API - i9chat ————— Started since Feb. 2024

A full-fledged chat app API built in Go, featuring user authentication, direct and group messaging using text or voice, media sharing, group creation and management, media sharing, user search, and scalable architecture using Neo4j, Redis, and GCS.

Featuring:

- **Go:** sync.Map, sync.WaitGroup, Channels, Goroutines, Data parallelism
- **Redis KV:** Hash, Unsorted/Sorted Set, ZCARD, SCARD, ZRANGE, ZSCAN, SDIFF
- **Redis Pipelining:** Batch Reads/Writes, 1-RTT. Reduced network I/O cost
- **Redis Streams:** Event sourcing, Event streaming, Background tasks queue
- **Redis Pub/Sub:** Subscription-based user online/offline status update delivery
- **Neo4j/Cypher:** Graph data model, Cypher 25, APOC
- **WebSocket:** Server-to-Client events, and Client-to-Server actions/commands.
- **Google Cloud Storage:** Signed up/download URLs. Chat message multimedia
- JWT, bcrypt, helmet
- **MessagePack** (major use), JSON (minor use)
- **Fiber (v3):** Go’s fastest HTTP API framework built on Fasthttp
- **Background Workers:** XREADGROUP, Caching, Reliability, Expensive operations (large DB writes and fan-outs), Idempotency, Redis transactional pipeline
- C4, Mermaid, DBDiagram.io, httptest, stretchr-testify, go-testdeep, CI

Visit Repo (<https://github.com/the-real-i9/i9chat-server>) for architecture diagram, sequence diagrams, Graph model overview, and User-story test cases.

Remote File System API - i9rfs ————— Started since Apr. 2024

A remote file system API built in Node.js featuring user authentication, real-time file system operations, user-private directory tree and file system access, file metadata, and cloud object storage using WebSocket, Neo4j, and GCS.

Featuring:

- **FS operations:** mkdir, mkfil, copy, move, remove, rename, trash, restore
- **Neo4j/Cypher:** FS Graph model, FS tree, Object metadata
- **Variable Expression Matching:** File System tree/graph traversal search
- **WebSocket:** Client-Server bi-directional FS command-reply communication
- **Google Cloud Storage:** Signed up/download URLs, Cloud object management
- **MessagePack** (WebSocket message), **JSON** (HTTP payload)
- C4, Mermaid, DBDiagram.io, node:test, superwstest, CI

Visit Repo (<https://github.com/the-real-i9/i9rfs-server>) for architecture diagram, sequence diagrams, Graph model overview, and User-story test cases.
